

機能

1. パネルをドラッグすると背景色が白から黒へ段階的に変わる。
2. 点滅する中心付近をクリックすると点滅のタイミングが変わる。

BlinkerJPanel

```

public class Illusion extends JFrame{
    /**
     * Illusion 錯視 : 点滅のタイミングの誤認識
     */

    BlinkerJPanel leftPanel, rightPanel;
    int panelWidth=500; int panelHeight=500;
    int blinkingTime = 1000; // ms

    public Illusion() {
        super();
        setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);

        leftPanel = new BlinkerJPanel(Color.WHITE, blinkingTime, panelWidth, panelHeight);
        rightPanel = new BlinkerJPanel(Color.BLACK, blinkingTime, panelWidth, panelHeight);

        Thread leftPanelThread = new Thread(leftPanel);
        Thread rightPanelThread = new Thread(rightPanel);
        leftPanelThread.start(); rightPanelThread.start();

        add(leftPanel, BorderLayout.WEST);        add(rightPanel, BorderLayout.CENTER);
        pack(); setVisible(true);
    }

    public static void main(String[] args) {
        new Illusion();
    }
}

class BlinkerJPanel extends JPanel implements Runnable{
    Color backgroundColor; int tenmetu = 0 ; // 0 :BLACK, 1:WHITE
    int sleepTime = 100; int width, height ;

```

```

public BlinkerJPanel(Color bgColor, int sleepTime, int w, int h){
    width = w ; height = h ; backgroundColor = bgColor; this.sleepTime=sleepTime ;
    setPreferredSize( new Dimension(w,h) ) ;
    addMouseMotionListener( this ) ;
    addMouseListener( new MouseAdapter(){//匿名クラス : メソッドをオーバーライド
        public void mouseClicked(MouseEvent e) {
            //中心付近をクリックすると点滅のタイミングをずらす
            double mr = getR(e); if( mr < 50 ){ ++tenmetu; }
        }
    }
    });
}

```

```

public void mouseDragged(MouseEvent e) {
    double r = getR(e);
    if(r > 255){ r=255; }else if(r < 10 ){ r = 0 ; }
    int rgb = (int)r;
    backgroundColor = new Color( rgb, rgb, rgb );
    repaint();
}

```

```

public void mouseMoved(MouseEvent e) { }

```

```

double getR(MouseEvent e){
    double x = width*0.5 -e.getX(); double y = height*0.5 - e.getY();
    return Math.sqrt(x*x+y*y);
}

```

```

public void run(){ //Thread の start()でこの run()メソッドが呼び出される
    while(true){
        ++tenmetu; tenmetu = (tenmetu % 2); repaint();
        try {Thread.sleep(sleepTime);} catch (Exception e) { }
    }
}

```

```

protected void paintComponent(Graphics g) {
    super.paintComponent(g);
    g.setColor(backgroundColor); g.fillRect(0,0,width,height);

    if(tenmetu == 0){ g.setColor(Color.BLACK); g.fillOval(200,200,100,100); }
    else{ g.setColor(Color.WHITE); g.fillOval(200,200,100,100); }
}

```

```

}

```
